Students: in order to achieve an integral transition proposal for future economic and spatial quality hardly seems to be addressed. The dike. Their priority lies primarily with flood protection, while the dike-ring 14 merely appears to be a bureaucratic term only used by water boards and Rijkswaterstaat, the Currently dike-housing could once again play a supporting role in this transition. We are currently undergoing the transition to a knowledge-structure and economic development of The Netherlands and Dikes have always played a significant role in the spatial and environmental aspects of rising sea-levels and subsidence. This has been achieved thus continuously protect itself from the effects of climate change, Beyond the Dike
